CrInGeCrInGe Production. Super cringe introduction here:
Let's calculate smth with expression given:

$$e^{pi}$$

BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT THIS EXPRESSION IT'S VALUE = 23.140693 !!!
1 step: finding a derivation of function:

$$23.141$$

here it is:

$$0.000$$

Congratulations! The first derivation of the expression is:

$$0.000$$

IT'S VALUE = 0.000000 !!!
Let's calculate the 2 derivation of the expression:
Calculating the 1 derivation of the expression:
1 step: finding a derivation of function:

$$23.141$$

here it is:

$$0.000$$

Calculating the 2 derivation of the expression:
1 step: finding a derivation of function:

$$0.000$$

here it is:

$$0.000$$

Finally... The 2 derivation of the expression:

$$0.000$$

BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT THE 2 DERIVATION OF THIS EXPRESSION IT'S VALUE = 0.000000 !!!
There is no variables to count partical derivations
Maaaan... Why do you even need full derivation if it's 0?...
