

CrInGeCrInGe Production. Super cringe introduction here:  
 Let's calculate smth with expression given:

$$\tan x + \sin x$$

Firstly, let's insert all constants and simplify it:

$$\tan x + \sin x$$

BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT THIS EXPRESSION IN THE POINT ( $x = 0.000000$ )...

IT'S VALUE = 0.000000 !!!

Calculating the 1 derivation of the expression:

1 step: finding a derivation of function:

$$x$$

here it is:

$$1.000$$

2 step: finding a derivation of function:

$$\sin x$$

here it is:

$$\cos x$$

3 step: finding a derivation of function:

$$x$$

here it is:

$$1.000$$

4 step: finding a derivation of function:

$$\tan x$$

here it is:

$$\frac{1.000}{\cos x^{2.000}}$$

5 step: finding a derivation of function:

$$\tan x + \sin x$$

here it is:

$$\frac{1.000}{\cos x^{2.000}} + \cos x$$

Calculating the 2 derivation of the expression:

1 step: finding a derivation of function:

$$x$$

$$1$$

here it is:

$$1.000$$

2 step: finding a derivation of function:

$$\cos x$$

here it is:

$$(-1.000) \cdot \sin x$$

3 step: finding a derivation of function:

$$x$$

here it is:

$$1.000$$

4 step: finding a derivation of function:

$$\cos x$$

here it is:

$$(-1.000) \cdot \sin x$$

5 step: finding a derivation of function:

$$\cos x^{2.000}$$

here it is:

$$2.000 \cdot \cos x \cdot (-1.000) \cdot \sin x$$

6 step: finding a derivation of function:

$$1.000$$

here it is:

$$0.000$$

7 step: finding a derivation of function:

$$\frac{1.000}{\cos x^{2.000}}$$

here it is:

$$\frac{(-1.000) \cdot 2.000 \cdot \cos x \cdot (-1.000) \cdot \sin x}{(\cos x^{2.000})^{2.000}}$$

8 step: finding a derivation of function:

$$\frac{1.000}{\cos x^{2.000}} + \cos x$$

here it is:

$$\frac{(-1.000) \cdot 2.000 \cdot \cos x \cdot (-1.000) \cdot \sin x}{(\cos x^{2.000})^{2.000}} + (-1.000) \cdot \sin x$$

Finally... The 2 derivation of the expression:

$$\frac{(-1.000) \cdot 2.000 \cdot \cos x \cdot (-1.000) \cdot \sin x}{(\cos x^{2.000})^{2.000}} + (-1.000) \cdot \sin x$$

BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT THE 2  
DERIVATION OF THIS EXPRESSION IN THE POINT (x = 0.000000)...

IT'S VALUE = 0.000000 !!!

Partial derivation of the expression on the variable 'x':

$$\frac{1.000}{\cos x^{2.000}} + \cos x$$

IN THE POINT (x = 0.000000) IT'S VALUE = 2.000000 !!!

Maklorens formula:

$$2.000 \cdot x + 0.167 \cdot x^{3.000}$$

And remainig member is o maloe from:

$$x^{3.000}$$
