

Let's calculate smth with a given function:  $f(x, y) = \sin x \cdot y^{2.000}$   
Firstly, let's insert all constants and simplify this expression:  $f(x, y) = \sin x \cdot y^{2.000}$   
BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT IT!!!  
In the point (x = 3.000, y = 2.000) it's value = 0.564  
Personally, I've always thought about first derivation of something like that function... Haven't you?  
But now, by using informatics and math skills I feel that I'm prepared enough to calculate it!  
1 step. finding a derivation of:  
 $y$   
While preparing for exams, I learned a lot of new things, for example:  
 $(y)' =$   
=1.000  
2 step. finding a derivation of:  
 $y^{2.000}$   
It's really easy to find:  
 $(y^{2.000})' =$   
=2.000  $\cdot y$   
3 step. finding a derivation of:  
 $x$   
My roommate mumbled it in his sleep all night:  
 $(x)' =$   
=1.000  
4 step. finding a derivation of:  
 $\sin x$   
Sounds logical that it is the same as:  
 $(\sin x)' =$   
= $\cos x$   
5 step. finding a derivation of:  
 $\sin x \cdot y^{2.000}$   
For centuries, people have hunted for the secret knowledge that:  
 $(\sin x \cdot y^{2.000})' =$   
= $\cos x \cdot y^{2.000} + 2.000 \cdot y \cdot \sin x$   
Congratulations! The first derivation of the expression is:  
 $\cos x \cdot y^{2.000} + 2.000 \cdot y \cdot \sin x$ In the point (x = 3.000, y = 2.000) it's value = -3.395  
Let's calculate the 4 derivation of the expression:  
Calculating the 1 derivation of the expression:  
1 step. finding a derivation of:  
 $y$   
Sounds logical that it is the same as:  
 $(y)' =$   
=1.000  
2 step. finding a derivation of:  
 $y^{2.000}$   
It's really easy to find:  
 $(y^{2.000})' =$   
=2.000  $\cdot y$   
3 step. finding a derivation of:  
 $x$   
My roommate mumbled it in his sleep all night:  
 $(x)' =$   
=1.000  
4 step. finding a derivation of:  
 $\sin x$   
What if it equals:  
 $(\sin x)' =$   
= $\cos x$   
5 step. finding a derivation of:  
 $\sin x \cdot y^{2.000}$   
It's really easy to find:  
 $(\sin x \cdot y^{2.000})' =$   
= $\cos x \cdot y^{2.000} + 2.000 \cdot y \cdot \sin x$   
Calculating the 2 derivation of the expression:  
1 step. finding a derivation of:  
 $x$   
Even my two-aged sister knows that it equals:  
 $(x)' =$   
=1.000  
2 step. finding a derivation of:  
 $\sin x$   
When I was child, my father always told me: "Remember, son:  
 $(\sin x)' =$   
= $\cos x$   
3 step. finding a derivation of:  
 $y$   
I spend the hole of my life to find the answer and finally it's:  
 $(y)' =$   
=1.000  
4 step. finding a derivation of:  
2.000  
Man... Just look:  
 $(2.000)' =$   
=0.000  
5 step. finding a derivation of:  
2.000  $\cdot y$

For centuries, people have hunted for the secret knowledge that:

$$(2.000 \cdot y)' =$$

=2.000

6 step. finding a derivation of:

$$2.000 \cdot y \cdot \sin x$$

It's really easy to find:

$$(2.000 \cdot y \cdot \sin x)' =$$

= $2.000 \cdot \sin x + \cos x \cdot 2.000 \cdot y$

7 step. finding a derivation of:

$$y$$

It's simple as fuck:

$$(y)' =$$

=1.000

8 step. finding a derivation of:

$$y^{2.000}$$

thanks to the results of my colleagues' scientific work, I know that it equals:

$$(y^{2.000})' =$$

= $2.000 \cdot y$

9 step. finding a derivation of:

$$x$$

When I was child, my father always told me: "Remember, son:

$$(x)' =$$

=1.000

10 step. finding a derivation of:

$$\cos x$$

It's really easy to find:

$$(\cos x)' =$$

= $(-1.000) \cdot \sin x$

11 step. finding a derivation of:

$$\cos x \cdot y^{2.000}$$

I was asked not to tell anyone that:

$$(\cos x \cdot y^{2.000})' =$$

= $(-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot \cos x$

12 step. finding a derivation of:

$$\cos x \cdot y^{2.000} + 2.000 \cdot y \cdot \sin x$$

For centuries, people have hunted for the secret knowledge that:

$$(\cos x \cdot y^{2.000} + 2.000 \cdot y \cdot \sin x)' =$$

= $(-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot \cos x + 2.000 \cdot \sin x + \cos x \cdot 2.000 \cdot y$

Calculating the 3 derivation of the expression:

1 step. finding a derivation of:

$$y$$

My roommate mumbled it in his sleep all night:

$$(y)' =$$

=1.000

2 step. finding a derivation of:

$$2.000$$

What if it equals:

$$(2.000)' =$$

=0.000

3 step. finding a derivation of:

$$2.000 \cdot y$$

Even my two-aged sister knows that it equals:

$$(2.000 \cdot y)' =$$

=2.000

4 step. finding a derivation of:

$$x$$

I spend the hole of my life to find the answer and finally it's:

$$(x)' =$$

=1.000

5 step. finding a derivation of:

$$\cos x$$

Even my two-aged sister knows that it equals:

$$(\cos x)' =$$

= $(-1.000) \cdot \sin x$

6 step. finding a derivation of:

$$\cos x \cdot 2.000 \cdot y$$

While preparing for exams, I learned a lot of new things, for example:

$$(\cos x \cdot 2.000 \cdot y)' =$$

= $(-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x$

7 step. finding a derivation of:

$$x$$

When I was child, my father always told me: "Remember, son:

$$(x)' =$$

=1.000

8 step. finding a derivation of:

$$\sin x$$

Sounds logical that it is the same as:

$$(\sin x)' =$$

= $\cos x$

9 step. finding a derivation of:

$$2.000$$

A true prince must know that it equals:

$$(2.000)' =$$

=0.000

10 step. finding a derivation of:

$2.000 \cdot \sin x$   
 My roommate mumbled it in his sleep all night:  
 $(2.000 \cdot \sin x)' =$   
 $=2.000 \cdot \cos x$   
 11 step. finding a derivation of:  
 $2.000 \cdot \sin x + \cos x \cdot 2.000 \cdot y$   
 My roommate mumbled it in his sleep all night:  
 $(2.000 \cdot \sin x + \cos x \cdot 2.000 \cdot y)' =$   
 $=2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x$   
 12 step. finding a derivation of:  
 $x$   
 If someone asked me that in the middle of the night, I wouldn't hesitate to say:  
 $(x)' =$   
 $=1.000$   
 13 step. finding a derivation of:  
 $\cos x$   
 A true prince must know that it equals:  
 $(\cos x)' =$   
 $=(-1.000) \cdot \sin x$   
 14 step. finding a derivation of:  
 $y$   
 My roommate mumbled it in his sleep all night:  
 $(y)' =$   
 $=1.000$   
 15 step. finding a derivation of:  
 $2.000$   
 While preparing for exams, I learned a lot of new things, for example:  
 $(2.000)' =$   
 $=0.000$   
 16 step. finding a derivation of:  
 $2.000 \cdot y$   
 It's really easy to find:  
 $(2.000 \cdot y)' =$   
 $=2.000$   
 17 step. finding a derivation of:  
 $2.000 \cdot y \cdot \cos x$   
 It's really easy to find:  
 $(2.000 \cdot y \cdot \cos x)' =$   
 $=2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y$   
 18 step. finding a derivation of:  
 $y$   
 When I was child, my father always told me: "Remember, son:  
 $(y)' =$   
 $=1.000$   
 19 step. finding a derivation of:  
 $y^{2.000}$   
 What if it equals:  
 $(y^{2.000})' =$   
 $=2.000 \cdot y$   
 20 step. finding a derivation of:  
 $x$   
 If someone asked me that in the middle of the night, I wouldn't hesitate to say:  
 $(x)' =$   
 $=1.000$   
 21 step. finding a derivation of:  
 $\sin x$   
 thanks to the results of my colleagues' scientific work, I know that it equals:  
 $(\sin x)' =$   
 $=\cos x$   
 22 step. finding a derivation of:  
 $(-1.000)$   
 A true prince must know that it equals:  
 $((-1.000))' =$   
 $=0.000$   
 23 step. finding a derivation of:  
 $(-1.000) \cdot \sin x$   
 A true prince must know that it equals:  
 $((-1.000) \cdot \sin x)' =$   
 $=(-1.000) \cdot \cos x$   
 24 step. finding a derivation of:  
 $(-1.000) \cdot \sin x \cdot y^{2.000}$   
 When I was child, my father always told me: "Remember, son:  
 $((-1.000) \cdot \sin x \cdot y^{2.000})' =$   
 $=(-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x$   
 25 step. finding a derivation of:  
 $(-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot \cos x$   
 For centuries, people have hunted for the secret knowledge that:  
 $((-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot \cos x)' =$   
 $=(-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y$   
 26 step. finding a derivation of:  
 $(-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot \cos x + 2.000 \cdot \sin x + \cos x \cdot 2.000 \cdot y$   
 A true prince must know that it equals:  
 $((-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot \cos x + 2.000 \cdot \sin x + \cos x \cdot 2.000 \cdot y)' =$   
 $=(-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x$   
 Calculating the 4 derivation of the expression:

1 step. finding a derivation of:  
 $x$   
I spend the hole of my life to find the answer and finally it's:  
 $(x)' =$   
=1.000  
2 step. finding a derivation of:  
 $\cos x$   
It's simple as fuck:  
 $(\cos x)' =$   
= $(-1.000) \cdot \sin x$   
3 step. finding a derivation of:  
2.000  
For centuries, people have hunted for the secret knowledge that:  
 $(2.000)' =$   
=0.000  
4 step. finding a derivation of:  
 $2.000 \cdot \cos x$   
It's really easy to find:  
 $(2.000 \cdot \cos x)' =$   
= $2.000 \cdot (-1.000) \cdot \sin x$   
5 step. finding a derivation of:  
 $y$   
It's really easy to find:  
 $(y)' =$   
=1.000  
6 step. finding a derivation of:  
2.000  
I spend the hole of my life to find the answer and finally it's:  
 $(2.000)' =$   
=0.000  
7 step. finding a derivation of:  
 $2.000 \cdot y$   
I was asked not to tell anyone that:  
 $(2.000 \cdot y)' =$   
=2.000  
8 step. finding a derivation of:  
 $x$   
If someone asked me that in the middle of the night, I wouldn't hesitate to say:  
 $(x)' =$   
=1.000  
9 step. finding a derivation of:  
 $\sin x$   
Even my two-aged sister knows that it equals:  
 $(\sin x)' =$   
= $\cos x$   
10 step. finding a derivation of:  
 $(-1.000)$   
I spend the hole of my life to find the answer and finally it's:  
 $((-1.000))' =$   
=0.000  
11 step. finding a derivation of:  
 $(-1.000) \cdot \sin x$   
It's really easy to find:  
 $((-1.000) \cdot \sin x)' =$   
= $(-1.000) \cdot \cos x$   
12 step. finding a derivation of:  
 $(-1.000) \cdot \sin x \cdot 2.000 \cdot y$   
It's really easy to find:  
 $((-1.000) \cdot \sin x \cdot 2.000 \cdot y)' =$   
= $(-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x$   
13 step. finding a derivation of:  
 $(-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x$   
It's simple as fuck:  
 $((-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x)' =$   
= $(-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x + 2.000 \cdot (-1.000) \cdot \sin x$   
14 step. finding a derivation of:  
 $x$   
It's simple as fuck:  
 $(x)' =$   
=1.000  
15 step. finding a derivation of:  
 $\cos x$   
A true prince must know that it equals:  
 $(\cos x)' =$   
= $(-1.000) \cdot \sin x$   
16 step. finding a derivation of:  
2.000  
My roommate mumbled it in his sleep all night:  
 $(2.000)' =$   
=0.000  
17 step. finding a derivation of:  
 $2.000 \cdot \cos x$   
I was asked not to tell anyone that:  
 $(2.000 \cdot \cos x)' =$   
= $2.000 \cdot (-1.000) \cdot \sin x$

18 step. finding a derivation of:  
 $2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x$   
I spend the hole of my life to find the answer and finally it's:  
 $(2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x)' =$   
 $= 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x + 2.000 \cdot (-1.000) \cdot \sin x$   
19 step. finding a derivation of:  
 $y$   
It's really easy to find:  
 $(y)' =$   
 $= 1.000$   
20 step. finding a derivation of:  
 $2.000$   
What if it equals:  
 $(2.000)' =$   
 $= 0.000$   
21 step. finding a derivation of:  
 $2.000 \cdot y$   
While preparing for exams, I learned a lot of new things, for example:  
 $(2.000 \cdot y)' =$   
 $= 2.000$   
22 step. finding a derivation of:  
 $x$   
Even my two-aged sister knows that it equals:  
 $(x)' =$   
 $= 1.000$   
23 step. finding a derivation of:  
 $\sin x$   
What if it equals:  
 $(\sin x)' =$   
 $= \cos x$   
24 step. finding a derivation of:  
 $(-1.000)$   
It's simple as fuck:  
 $((-1.000))' =$   
 $= 0.000$   
25 step. finding a derivation of:  
 $(-1.000) \cdot \sin x$   
My roommate mumbled it in his sleep all night:  
 $((-1.000) \cdot \sin x)' =$   
 $= (-1.000) \cdot \cos x$   
26 step. finding a derivation of:  
 $(-1.000) \cdot \sin x \cdot 2.000 \cdot y$   
It's simple as fuck:  
 $((-1.000) \cdot \sin x \cdot 2.000 \cdot y)' =$   
 $= (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x$   
27 step. finding a derivation of:  
 $x$   
A true prince must know that it equals:  
 $(x)' =$   
 $= 1.000$   
28 step. finding a derivation of:  
 $\cos x$   
My roommate mumbled it in his sleep all night:  
 $(\cos x)' =$   
 $= (-1.000) \cdot \sin x$   
29 step. finding a derivation of:  
 $2.000$   
A true prince must know that it equals:  
 $(2.000)' =$   
 $= 0.000$   
30 step. finding a derivation of:  
 $2.000 \cdot \cos x$   
A true prince must know that it equals:  
 $(2.000 \cdot \cos x)' =$   
 $= 2.000 \cdot (-1.000) \cdot \sin x$   
31 step. finding a derivation of:  
 $2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y$   
If someone asked me that in the middle of the night, I wouldn't hesitate to say:  
 $(2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y)' =$   
 $= 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x$   
32 step. finding a derivation of:  
 $x$   
I spend the hole of my life to find the answer and finally it's:  
 $(x)' =$   
 $= 1.000$   
33 step. finding a derivation of:  
 $\sin x$   
When I was child, my father always told me: "Remember, son:  
 $(\sin x)' =$   
 $= \cos x$   
34 step. finding a derivation of:  
 $(-1.000)$   
If someone asked me that in the middle of the night, I wouldn't hesitate to say:  
 $((-1.000))' =$   
 $= 0.000$

35 step. finding a derivation of:  
 $(-1.000) \cdot \sin x$   
thanks to the results of my colleagues' scientific work, I know that it equals:  
 $((-1.000) \cdot \sin x)' =$   
 $=(-1.000) \cdot \cos x$   
36 step. finding a derivation of:  
 $y$   
For centuries, people have hunted for the secret knowledge that:  
 $(y)' =$   
 $=1.000$   
37 step. finding a derivation of:  
 $2.000$   
For centuries, people have hunted for the secret knowledge that:  
 $(2.000)' =$   
 $=0.000$   
38 step. finding a derivation of:  
 $2.000 \cdot y$   
What if it equals:  
 $(2.000 \cdot y)' =$   
 $=2.000$   
39 step. finding a derivation of:  
 $2.000 \cdot y \cdot (-1.000) \cdot \sin x$   
If someone asked me that in the middle of the night, I wouldn't hesitate to say:  
 $(2.000 \cdot y \cdot (-1.000) \cdot \sin x)' =$   
 $=2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y$   
40 step. finding a derivation of:  
 $y$   
I was asked not to tell anyone that:  
 $(y)' =$   
 $=1.000$   
41 step. finding a derivation of:  
 $y^{2.000}$   
A true prince must know that it equals:  
 $(y^{2.000})' =$   
 $=2.000 \cdot y$   
42 step. finding a derivation of:  
 $x$   
Man... Just look:  
 $(x)' =$   
 $=1.000$   
43 step. finding a derivation of:  
 $\cos x$   
My roommate mumbled it in his sleep all night:  
 $(\cos x)' =$   
 $=(-1.000) \cdot \sin x$   
44 step. finding a derivation of:  
 $(-1.000)$   
It's simple as fuck:  
 $((-1.000))' =$   
 $=0.000$   
45 step. finding a derivation of:  
 $(-1.000) \cdot \cos x$   
I was asked not to tell anyone that:  
 $((-1.000) \cdot \cos x)' =$   
 $=(-1.000) \cdot (-1.000) \cdot \sin x$   
46 step. finding a derivation of:  
 $(-1.000) \cdot \cos x \cdot y^{2.000}$   
If someone asked me that in the middle of the night, I wouldn't hesitate to say:  
 $((-1.000) \cdot \cos x \cdot y^{2.000})' =$   
 $=(-1.000) \cdot (-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \cos x$   
47 step. finding a derivation of:  
 $(-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x$   
Man... Just look:  
 $((-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x)' =$   
 $=(-1.000) \cdot (-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \cos x + 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y$   
48 step. finding a derivation of:  
 $(-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y$   
When I was child, my father always told me: "Remember, son:  
 $((-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y)' =$   
 $=(-1.000) \cdot (-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \cos x + 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x$   
49 step. finding a derivation of:  
 $(-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x$   
It's really easy to find:  
 $((-1.000) \cdot \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \sin x + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x + (-1.000) \cdot \sin x \cdot 2.000 \cdot y + 2.000 \cdot \cos x)' =$   
 $=(-1.000) \cdot (-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \cos x + 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x + 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x + 2.000 \cdot (-1.000) \cdot \sin x$   
Finally... The 4 derivation of the expression:  
 $(-1.000) \cdot (-1.000) \cdot \sin x \cdot y^{2.000} + 2.000 \cdot y \cdot (-1.000) \cdot \cos x + 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x + 2.000 \cdot (-1.000) \cdot \sin x + (-1.000) \cdot \cos x \cdot 2.000 \cdot y + 2.000 \cdot (-1.000) \cdot \sin x + 2.000 \cdot (-1.000) \cdot \sin x$   
BRITISH SCIENTISTS WERE SHOCKED AGAIN, WHEN THEY COUNT THE 4 DERIVATION OF THIS EXPRESSION!!!  
In the point (x = 3.000, y = 2.000) it's value = 14.711  
Partial derivation of the expression on the variable x:  
 $\frac{\partial f}{\partial x} = 4.000 \cdot \cos x$   
In the point (x = 3.000, y = 2.000) it's value = -3.959970 !!!  
Partial derivation of the expression on the variable y:  
 $\frac{\partial f}{\partial y} = 0.141 \cdot 2.000 \cdot y$   
In the point (x = 3.000, y = 2.000) it's value = 0.564480 !!!

Full derivation:

$$\sqrt{(4.000 \cdot \cos x)^{2.000} + (0.141 \cdot 2.000 \cdot y)^{2.000}}$$

In the point (x = 3.000, y = 2.000) it's value = 4.000 !!!

Let's consider the expression as a function of x variable:  $f(x) = 4.000 \cdot \sin x$

Maklorens formula for  $x \rightarrow 3.000$ :  $f(x) = 0.564 + (-3.960) \cdot (x - 3.000) + (-0.282) \cdot (x - 3.000)^{2.000} + 0.660 \cdot (x - 3.000)^{3.000} + 0.024 \cdot (x - 3.000)^{4.000} + (-0.033) \cdot (x - 3.000)^{5.000} + o((x - 3.000)^{5.000})$

Graph f(x):

Tangent equation in the point x = 0.000:  $f(x) = 4.000 \cdot x$

Normal equation in the point x = 0.000:  $f(x) = (-0.250) \cdot (x - 0.000) + 0.000$
