1 Introduction

$CrInGeCrInGeProduction.Supercringeintroductionhere:$

2 Some basic knowledge about researching problem...

Parameters and constants we use in this work:
Constants (3):
e = 2.718282
pi = 3.141593
AbObA = 1337.228690
Variables (2):
x = 1.000000
opa = 13.000000
Parameters of exploration :
Number of differentiates : 2
Macloren's accuracy : 3
Tanget point : 0.200000
Delta coverage of tangent point: 2.500000
Graph diapasone : $[-1 : 15]$
So let's calculate smth with a given function: f(x, opa) = $\ln(1.000 + x \cdot opa)$
Firstly, let's simplify this expression (if possible): f(x, opa) = $\ln(1.000 + x \cdot opa)$

3 Exploration of the expression as a function of multiple variables

Calculation value of function in the point BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT IT!!!
In the point $M_0(x_0, opa_0) = (1.000, 13.000)$ **it's value** = 2.63906
Personally, I've always thought about first derivation of something like that function... Haven't you?
But now, by using informatics and math skills I feel that I'm prepared enough to calculate it!
`1 step:` Finding a derivation of opa
When I was child, my father always told me: "Remember, son:
$(opa)' = ... = \textbf{top secret} = ... =$
$= 1.000$
`2 step:` Finding a derivation of x
thanks to the results of my colleagues' scientific work, I know that:
$(x)' = ... = \textbf{top secret} = ... =$
$= 1.000$
`3 step:` Finding a derivation of $x \cdot opa$
What if:
$(x \cdot opa)' = ... = \textbf{top secret} = ... =$
$= opa + x$
`4 step:` Finding a derivation of 1.000
If someone asked me that in the middle of the night, I wouldn't hesitate to say:
$(1.000)' = ... = \textbf{top secret} = ... =$
$= 0.000$
`5 step:` Finding a derivation of $1.000 + x \cdot opa$
It's really easy to find:
$(1.000 + x \cdot opa)' = ... = \textbf{top secret} = ... =$
$= opa + x$
`6 step:` Finding a derivation of $\ln(1.000 + x \cdot opa)$
My friends always beat me, because I didn't know that:
$(\ln(1.000 + x \cdot opa))' = ... = \textbf{top secret} = ... =$
$= \frac{1.000}{1.000+x \cdot opa} \cdot (opa + x)$
Congratulations! **The first derivation of the expression** is:
$f'(x, opa) = \frac{1.000}{1.000+x \cdot opa} \cdot (opa + x)$
In the point $M_0(x_0, opa_0) = (1.000, 13.000)$ it's value = 1.00000

Finding the 2 derivation Let's find **the 1 derivation** of the expression:
`1 step:` Finding a derivation of opa
Sounds logical that it is the same as:
$(opa)' = ... = \textbf{top secret} = ... =$
$= 1.000$
`2 step:` Finding a derivation of x
My roommate mumbled it in his sleep all night:
$(x)' = ... = \textbf{top secret} = ... =$
$= 1.000$
`3 step:` Finding a derivation of $x \cdot opa$
What if:
$(x \cdot opa)' = ... = \textbf{top secret} = ... =$
$= opa + x$
`4 step:` Finding a derivation of 1.000
While preparing for exams, I learned a lot of new things, for example:
$(1.000)' = ... = \textbf{top secret} = ... =$
$= 0.000$
`5 step:` Finding a derivation of $1.000 + x \cdot opa$
Sounds logical that it is the same as:
$(1.000 + x \cdot opa)' = ... = \textbf{top secret} = ... =$
$= opa + x$
`6 step:` Finding a derivation of $\ln(1.000 + x \cdot opa)$
I was asked not to tell anyone that:
$(\ln(1.000 + x \cdot opa))' = ... = \textbf{top secret} = ... =$
$= \frac{1.000}{1.000+x \cdot opa} \cdot (opa + x)$
Let's find **the 2 derivation** of the expression:
`1 step:` Finding a derivation of x
Even my two-aged sister knows that:
$(x)' = ... = \textbf{top secret} = ... =$
$= 1.000$
`2 step:` Finding a derivation of opa
I was asked not to tell anyone that:

$(opa)' = ... =$ top secret $= ... =$
$= 1.000$
`3 step:` Finding a derivation of $opa + x$
If someone asked me that in the middle of the night, I wouldn't hesitate to say:
$(opa + x)' = ... =$ top secret $= ... =$
$= 2.000$
`4 step:` Finding a derivation of opa
thanks to the results of my colleagues' scientific work, I know that:
$(opa)' = ... =$ top secret $= ... =$
$= 1.000$
`5 step:` Finding a derivation of x
My roommate mumbled it in his sleep all night:
$(x)' = ... =$ top secret $= ... =$
$= 1.000$
`6 step:` Finding a derivation of $x \cdot opa$
Even my two-aged sister knows that:
$(x \cdot opa)' = ... =$ top secret $= ... =$
$= opa + x$
`7 step:` Finding a derivation of 1.000
Man... Just look:
$(1.000)' = ... =$ top secret $= ... =$
$= 0.000$
`8 step:` Finding a derivation of $1.000 + x \cdot opa$
For centuries, people have hunted for the secret knowledge that:
$(1.000 + x \cdot opa)' = ... =$ top secret $= ... =$
$= opa + x$
`9 step:` Finding a derivation of 1.000
I was asked not to tell anyone that:
$(1.000)' = ... =$ top secret $= ... =$
$= 0.000$
`10 step:` Finding a derivation of $\frac{1.000}{1.000+x \cdot opa}$
For centuries, people have hunted for the secret knowledge that:
$(\frac{1.000}{1.000+x \cdot opa})' = ... =$ top secret $= ... =$
$= \frac{(-1.000) \cdot (opa+x)}{(1.000+x \cdot opa)^{2.000}}$
`11 step:` Finding a derivation of $\frac{1.000}{1.000+x \cdot opa} \cdot (opa + x)$
When I was child, my father always told me: "Remember, son:
$(\frac{1.000}{1.000+x \cdot opa} \cdot (opa + x))' = ... =$ top secret $= ... =$
$= \frac{(-1.000) \cdot (opa+x)}{(1.000+x \cdot opa)^{2.000}} \cdot (opa + x) + 2.000 \cdot \frac{1.000}{1.000+x \cdot opa}$
Finally... The 2 derivation of the expression:
$f^{(2)}(\text{x, opa}) = \frac{(-1.000) \cdot (opa+x)}{(1.000+x \cdot opa)^{2.000}} \cdot (opa + x) + 2.000 \cdot \frac{1.000}{1.000+x \cdot opa}$
BRITISH SCIENTISTS WERE SHOCKED AGAIN, WHEN THEY COUNT THE 2 DERIVATION OF THIS EXPRESSION!!!
In the point $M_0(x_0,\ opa_0) = (1.000,\ 13.000)$ it's value = -0.85714

Finding partical derivations Partial derivation of the expression on the variable x:
$\frac{\partial f}{\partial x} = 13.000 \cdot \frac{1.000}{1.000+13.000 \cdot x}$
In the point $M_0(x_0,\ opa_0) = (1.000,\ 13.000)$ it's value = 0.92857 !!!
Partial derivation of the expression on the variable opa:
$\frac{\partial f}{\partial opa} = \frac{1.000}{1.000+opa}$
In the point $M_0(x_0,\ opa_0) = (1.000,\ 13.000)$ it's value = 0.07143 !!!

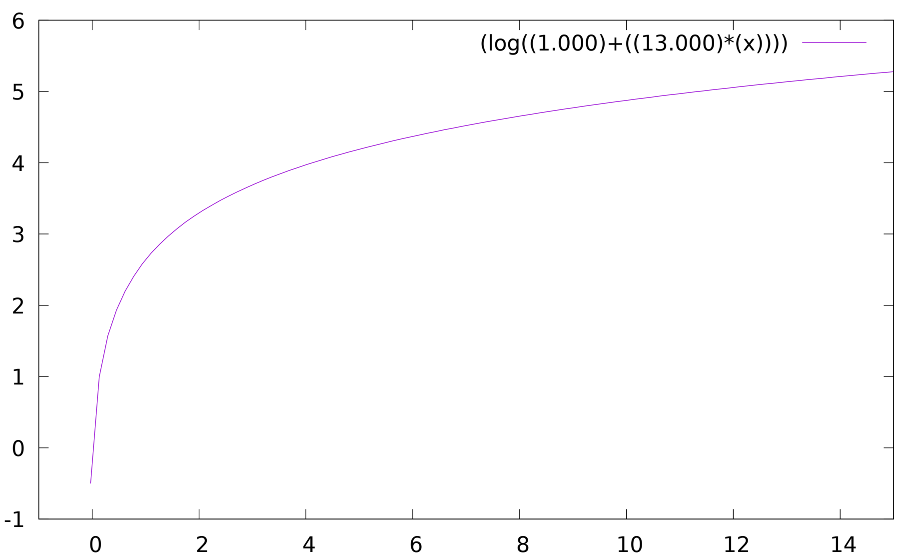
Finding full derivation Full derivation:
$\sqrt{(13.000 \cdot \frac{1.000}{1.000+13.000 \cdot x})^{2.000} + (\frac{1.000}{1.000+opa})^{2.000}}$
In the point $M_0(x_0,\ opa_0) = (1.000,\ 13.000)$ it's value = 0.93131 !!!

4 Exploration the expression as a function of the first variable

Now let's consider the expression as a function of x variable: $\text{f(x)} = \ln(1.000 + 13.000 \cdot x)$

Decomposing on Macloren's formula **Maklorens formula for** $x \to x_0 = 1.000$:
$\text{f(x)} = 2.639 + 0.929 \cdot (x - 1.000) + (-0.431) \cdot (x - 1.000)^{2.000} + 0.267 \cdot (x - 1.000)^{3.000} + \text{o}((x - 1.000)^{3.000})$

Graphics **Graph** $\text{f(x)} = \ln(1.000 + 13.000 \cdot x)$ on the diapasone $x \in [-1 : 15]$:



Equations in the point **Tangent equation** in the point $x_0 = 0.200$:

f(x) $= 3.611 \cdot (x - 0.200) + 1.281$

Normal equation in the point $x_0 = 0.200$:

f(x) $= (-0.277) \cdot (x - 0.200) + 1.281$

Their graphs in $\delta = 2.50000$ coverage of the point $x_0 = 0.200000$
