Let's calculate smth with a given function: f(x, y) = \sin x \cdot y^{2.000}
    Firstly, let's insert all constants and simplify this expression: f(x, y) = \sin x \cdot y^{2.000}
    BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT IT!!!
    In the point (x = 3.000, y = 2.000) it's value = 0.564
    Personally, I've always thought about first derivation of something like that function... Haven't you?
    But now, by using informatics and math skills I feel that I'm prepared enough to calculate it!
    1 step. finding a derivation of:
    While preparing for exams, I learned a lot of new things, for example:
    (y)' =
=1.000
    2 step. finding a derivation of:
   y^{2.000}
   It's really easy to find:
    (y^{2.000})' =
=2.000 \cdot y
   3 step. finding a derivation of:
   My roommate mumbled it in his sleep all night:
    (x)' =
=1.000
    4 step. finding a derivation of:
    Sounds logical that it is the same as:
    (\sin x)' =
=\cos x
    5 step. finding a derivation of:
   \sin x \cdot y^{2.000}
   For centuries, people have hunted for the secret knowledge that:
    (\sin x \cdot y^{2.000})' =
=\cos x \cdot y^{2.000} + 2.000 \cdot y \cdot \sin x
    Congratulations! The first derivation of the expression is:
   \cos x \cdot y^{2.000} + 2.000 \cdot y \cdot \sin xIn the point (x = 3.000, y = 2.000) it's value = -3.395
    Let's calculate the 4 derivation of the expression:
    Calculating the 1 derivation of the expression:
    1 step. finding a derivation of:

    3 step. finding a derivation of:
   My roommate mumbled it in his sleep all night:
    (x)' =
=1.000
    4 step. finding a derivation of:
    \sin x
    What if it equals:
    (\sin x)' =
=\cos x
   5 step. finding a derivation of:
   \sin x \cdot y^{2.000}
It's really easy to find:

(\sin x \cdot y^{2.000})' =
=\cos x \cdot y^{2.000} + 2.000 \cdot y \cdot \sin x
    Calculating the 2 derivation of the expression:
    1 step. finding a derivation of:
    Even my two-aged sister knows that it equals:
    (x)' =
=1.000
    2 step. finding a derivation of:
    When I was child, my father always told me: "Remember, son:

    3 step. finding a derivation of:
   I spend the hole of my life to find the answer and finally it's:
    (y)' =
=1.000
    4 step. finding a derivation of:
    2.000
    Man... Just look:
    (2.000)' =
=0.000
    5 step. finding a derivation of:
   2.000 \cdot y
