CrInGeCrInGe Production. Super cringe introduction here: Let's calculate smth with expression given: $f(x, y) =$	$x^{3.000} \cdot \ln{(x+y)}$
Firstly, let's insert all constants and simplify it:	$x^{3.000} \cdot \ln(x+y)$
RITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT IT!!! IN THE POINT ( $x=3.000$ 1 step: finding a derivation of function:	0, y = 2.000) IT'S VALUE = 43.455 !!! $y$
ere it is:	1.000
step: finding a derivation of function:	x
step: finding a derivation of function:	1.000
ere it is:	(x+y)
step: finding a derivation of function:	$2.000$ $\ln\left(x+y\right)$
ere it is:	$2.000 \cdot \frac{1.000}{x+y}$
step: finding a derivation of function:	x + y $x$
ere it is:	1.000
step: finding a derivation of function:	$x^{3.000}$
step: finding a derivation of function:	$3.000\cdot x^{2.000}$
ere it is:	$x^{3.000} \cdot \ln\left(x+y\right)$
ongratulations! The first derivation of the expression is:	$3.000 \cdot x^{2.000} \cdot \ln(x+y) + 2.000 \cdot \frac{1.000}{x+y} \cdot x^{3.000}$
I THE POINT (x = $3.000$ , y = $2.000$ )IT'S VALUE = $54.255$ !!!	$3.000 \cdot x^{2.000} \cdot \ln(x+y) + 2.000 \cdot \frac{1.000}{x+y} \cdot x^{3.000}$
Let's calculate the 3 derivation of the expression: Calculating the 1 derivation of the expression: 1 step: finding a derivation of function:	
re it is:	y
step: finding a derivation of function:	1.000
re it is:	x $1.000$
step: finding a derivation of function:	(x+y)
ere it is:	2.000
step: finding a derivation of function:	$\ln{(x+y)}$
re it is:	$2.000 \cdot \frac{1.000}{x+y}$
step: finding a derivation of function:  re it is:	x
step: finding a derivation of function:	1.000
ere it is:	$x^{3.000}$
step: finding a derivation of function:	$3.000 \cdot x^{2.000}$ $x^{3.000} \cdot \ln{(x+y)}$
ere it is:	$3.000 \cdot x^{2.000} \cdot \ln(x+y) + 2.000 \cdot \frac{1.000}{x+y} \cdot x^{3.000}$
alculating the 2 derivation of the expression:  1 step: finding a derivation of function:	x + y
ere it is:	1 000
step: finding a derivation of function:	$x^{3.000}$
ere it is:	$3.000 \cdot x^{2.000}$
step: finding a derivation of function:	y
re it is: step: finding a derivation of function:	1.000
re it is:	x
step: finding a derivation of function:	1.000
re it is:	x + y $2.000$
step: finding a derivation of function:	1.000
re it is:	0.000
step: finding a derivation of function:	$\frac{1.000}{x+y}$
re it is:	$\frac{(-1.000) \cdot 2.000}{\left(x+y\right)^{2.000}}$
step: finding a derivation of function:	(x+y) $2.000$
re it is:	0.000
step: finding a derivation of function:	$2.000 \cdot \frac{1.000}{x+y}$
re it is:	$2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}}$
step: finding a derivation of function:	$2.000 \cdot \frac{1.000}{x+y} \cdot x^{3.000}$
re it is:	
step: finding a derivation of function:	$2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot x^{3.000} + 3.000 \cdot x^{2.000} \cdot 2.000 \cdot \frac{1.00}{x+1}$
re it is:	y $1.000$
step: finding a derivation of function:	x
re it is:	1.000
step: finding a derivation of function:	(x+y)
step: finding a derivation of function:	2.000
re it is:	$\ln{(x+y)}$ $1.000$
step: finding a derivation of function:	$2.000 \cdot \frac{1.000}{x+y}$
re it is:	1 000
step: finding a derivation of function:	$1.000$ $x^{2.000}$
ere it is:	$2.000 \cdot x$
step: finding a derivation of function:	3.000
ere it is:	0.000
step: finding a derivation of function: re it is:	$3.000 \cdot x^{2.000}$
- O - E O -	$3.000 \cdot 2.000 \cdot x$

```
here it is:
                                                                                                                               3.000 \cdot 2.000 \cdot x \cdot \ln{(x+y)} + 2.000 \cdot \frac{1.000}{x+y} \cdot 3.000 \cdot x^{2.000} + 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot x^{3.000} + 3.000 \cdot x^{2.000} \cdot 2.000 \cdot \frac{1.000}{x+y}
 Calculating the 3 derivation of the expression:
     1 step: finding a derivation of function:
                                                                                                                                                                                                          y
here it is:
                                                                                                                                                                                                        1.000
2 step: finding a derivation of function:
                                                                                                                                                                                                          \boldsymbol{x}
here it is:
                                                                                                                                                                                                       1.000
3 step: finding a derivation of function:
                                                                                                                                                                                                       x + y
here it is:
                                                                                                                                                                                                       2.000
4 step: finding a derivation of function:
                                                                                                                                                                                                        1.000
here it is:
                                                                                                                                                                                                       0.000
5 step: finding a derivation of function:
                                                                                                                                                                                                        1.000
                                                                                                                                                                                                       \overline{x+y}
here it is:
                                                                                                                                                                                                 (-1.000) \cdot 2.000
                                                                                                                                                                                                   (x+y)^{2.000}
6 step: finding a derivation of function:
                                                                                                                                                                                                       2.000
here it is:
                                                                                                                                                                                                       0.000
7 step: finding a derivation of function:
                                                                                                                                                                                                  2.000 \cdot \frac{1.000}{x+y}
here it is:
                                                                                                                                                                                              2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}}
 8 step: finding a derivation of function:
                                                                                                                                                                                                          \boldsymbol{x}
here it is:
                                                                                                                                                                                                        1.000
9 step: finding a derivation of function:
                                                                                                                                                                                                       x^{2.000}
here it is:
                                                                                                                                                                                                      2.000 \cdot x
 10 step: finding a derivation of function:
                                                                                                                                                                                                       3.000
here it is:
                                                                                                                                                                                                       0.000
11 step: finding a derivation of function:
                                                                                                                                                                                                   3.000 \cdot x^{2.000}
here it is:
                                                                                                                                                                                                 3.000 \cdot 2.000 \cdot x
 12 step: finding a derivation of function:
                                                                                                                                                                                        3.000 \cdot x^{2.000} \cdot 2.000 \cdot \frac{1.000}{x+y}
here it is:
                                                                                                                                                               3.000 \cdot 2.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{x+y} + 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot 3.000 \cdot x^{2.000}
13 step: finding a derivation of function:
here it is:
                                                                                                                                                                                                        1.000
 14 step: finding a derivation of function:
                                                                                                                                                                                                        x^{3.000}
here it is:
                                                                                                                                                                                                   3.000 \cdot x^{2.000}
 15 step: finding a derivation of function:
here it is:
                                                                                                                                                                                                        1.000
 16 step: finding a derivation of function:
                                                                                                                                                                                                          \boldsymbol{x}
here it is:
                                                                                                                                                                                                        1.000
17 step: finding a derivation of function:
                                                                                                                                                                                                       (x+y)
here it is:
                                                                                                                                                                                                       2.000
 18 step: finding a derivation of function:
                                                                                                                                                                                                  \left(x+y\right)^{2.000}
here it is:
                                                                                                                                                                                             2.000 \cdot 2.000 \cdot (x+y)
 19 step: finding a derivation of function:
                                                                                                                                                                                                      (-2.000)
here it is:
                                                                                                                                                                                                       0.000
 20 step: finding a derivation of function:
                                                                                                                                                                                                   \frac{(-2.000)}{(x+y)^{2.000}}
here it is:
                                                                                                                                                                               \frac{(-1.000) \cdot (-2.000) \cdot 2.000 \cdot 2.000 \cdot (x+y)}{((x+y)^{2.000})^{2.000}}
21 step: finding a derivation of function:
                                                                                                                                                                                                        2.000
here it is:
                                                                                                                                                                                                        0.000
22 step: finding a derivation of function:
                                                                                                                                                                                              2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}}
here it is:
                                                                                                                                                                         2.000 \cdot \frac{(-1.000) \cdot (-2.000) \cdot 2.000 \cdot 2.000 \cdot (x+y)}{((x+y)^{2.000})^{2.000}}
23 step: finding a derivation of function:
                                                                                                                                                                                        2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot x^{3.000}
here it is:
                                                                                                                                            2.000 \cdot \frac{(-1.000) \cdot (-2.000) \cdot 2.000 \cdot 2.000 \cdot (x+y)}{((x+y)^{2.000})^{2.000}} \cdot x^{3.000} + 3.000 \cdot x^{2.000} \cdot 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}}
24 step: finding a derivation of function:
                                                                                                                                                                    2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot x^{3.000} + 3.000 \cdot x^{2.000} \cdot 2.000 \cdot \frac{1.000}{x+y}
here it is:
                                                                                                2.000 \cdot \frac{(-1.000) \cdot (-2.000) \cdot 2.000 \cdot 2.000 \cdot (x+y)}{\left((x+y)^{2.000}\right)^{2.000}} \cdot x^{3.000} + 3.000 \cdot x^{2.000} \cdot 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} + 3.000 \cdot 2.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{x+y} + 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot 3.000 \cdot x^{2.000}
 25 step: finding a derivation of function:
here it is:
                                                                                                                                                                                                        1.000
 26 step: finding a derivation of function:
                                                                                                                                                                                                       x^{2.000}
here it is:
                                                                                                                                                                                                      2.000 \cdot x
27 step: finding a derivation of function:
                                                                                                                                                                                                       3.000
here it is:
                                                                                                                                                                                                       0.000
 28 step: finding a derivation of function:
                                                                                                                                                                                                   3.000 \cdot x^{2.000}
here it is:
                                                                                                                                                                                                 3.000 \cdot 2.000 \cdot x
 29 step: finding a derivation of function:
here it is:
                                                                                                                                                                                                        1.000
 30 step: finding a derivation of function:
                                                                                                                                                                                                          \boldsymbol{x}
here it is:
                                                                                                                                                                                                       1.000
31 step: finding a derivation of function:
                                                                                                                                                                                                       x + y
here it is:
                                                                                                                                                                                                       2.000
 32 step: finding a derivation of function:
                                                                                                                                                                                                        1.000
                                                                                                                                                                                                          2
```

 $3.000 \cdot x^{2.000} \cdot \ln{(x+y)}$ 

 $3.000 \cdot 2.000 \cdot x \cdot \ln(x+y) + 2.000 \cdot \frac{1.000}{x+y} \cdot 3.000 \cdot x^{2.000}$ 

 $3.000 \cdot x^{2.000} \cdot \ln(x+y) + 2.000 \cdot \frac{1.000}{x+y} \cdot x^{3.000}$

here it is:
                                                                                                                                                                                                                                                                                                                                                                                                                               0.000
  43 step: finding a derivation of function:
                                                                                                                                                                                                                                                                                                                                                                                                                            2.000 \cdot x
here it is:
                                                                                                                                                                                                                                                                                                                                                                                                                               2.000
  44 step: finding a derivation of function:
                                                                                                                                                                                                                                                                                                                                                                                                                               3.000
here it is:
                                                                                                                                                                                                                                                                                                                                                                                                                               0.000
  45 step: finding a derivation of function:
                                                                                                                                                                                                                                                                                                                                                                                                                   3.000 \cdot 2.000 \cdot x
  here it is:
                                                                                                                                                                                                                                                                                                                                                                                                                               6.000
  46 step: finding a derivation of function:
                                                                                                                                                                                                                                                                                                                                                                                                    3.000 \cdot 2.000 \cdot x \cdot \ln\left(x+y\right)
here it is:
                                                                                                                                                                                                                                                                                                                                                                   6.000 \cdot \ln(x+y) + 2.000 \cdot \frac{1.000}{x+y} \cdot 3.000 \cdot 2.000 \cdot x
 47 step: finding a derivation of function:
                                                                                                                                                                                                                                                                                                                                                        3.000 \cdot 2.000 \cdot x \cdot \ln(x+y) + 2.000 \cdot \frac{1.000}{x+y} \cdot 3.000 \cdot x^{2.000}
here it is:
                                                                                                                                                                                                                                                                    6.000 \cdot \ln{(x+y)} + 2.000 \cdot \frac{1.000}{x+y} \cdot 3.000 \cdot 2.000 \cdot x + 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot 3.000 \cdot x^{2.000} + 3.000 \cdot 2.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{x+y}
  48 step: finding a derivation of function:
                                                                                                                                                                                                                                                                       3.000 \cdot 2.000 \cdot x \cdot \ln{(x+y)} + 2.000 \cdot \frac{1.000}{x+y} \cdot 3.000 \cdot x^{2.000} + 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot x^{3.000} + 3.000 \cdot x^{2.000} \cdot 2.000 \cdot \frac{1.000}{x+y}
here it is:
                                     6.000 \cdot \ln{(x+y)} + 2.000 \cdot \frac{1.000}{x+y} \cdot 3.000 \cdot 2.000 \cdot x + 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{x+y} + 2.000 \cdot \frac{(-1.000) \cdot (-2.000) \cdot 2.000 \cdot (x+y)}{((x+y)^{2.000})^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{(-2.000) \cdot (-2.000) \cdot (-2.000) \cdot (x+y)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{(-2.000) \cdot (-2.000) \cdot (-2.000) \cdot (x+y)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{(-2.000) \cdot (-2.000) \cdot (-2.000) \cdot (x+y)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{(-2.000) \cdot (-2.000) \cdot (x+y)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{(-2.000) \cdot (-2.000) \cdot (x+y)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{(-2.000) \cdot (-2.000) \cdot (x+y)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{(-2.000) \cdot (-2.000) \cdot (x+y)}{(x+y)^{2.000}} \cdot \frac{(-2.000) \cdot (x+y)}{(x+y)^{
 Finally... The 3 derivation of the expression:
                                     6.000 \cdot \ln{(x+y)} + 2.000 \cdot \frac{1.000}{x+y} \cdot 3.000 \cdot 2.000 \cdot x + 2.000 \cdot \frac{(-2.000)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{x+y} + 2.000 \cdot \frac{(-1.000) \cdot (-2.000) \cdot 2.000 \cdot (x+y)}{(x+y)^{2.000}} \cdot 3.000 \cdot x \cdot 2.000 \cdot \frac{1.000}{(x+y)^{2.000}} \cdot \frac{1.000}{(x+y)^{2.000}
  BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT THE 3 DERIVATION OF THIS EXPRESSION!!! IN THE POINT (x = 3.000, y = 2.000)IT'S VALUE = 21.753!!!
          Partial derivation of the expression on the variable 'x':
                                                                                                                                                                                                                                                                                                                                                                   3.000 \cdot x^{2.000} \cdot \ln(x + 2.000) + \frac{1.000}{x + 2.000} \cdot x^{3.000}
 IN THE POINT (x = 3.000, y = 2.000) IT'S VALUE = 48.854824 !!!
          Partial derivation of the expression on the variable 'y':
                                                                                                                                                                                                                                                                                                                                                                                                             27.000 \cdot \frac{1.000}{3.000 + y}
  IN THE POINT (x = 3.000, y = 2.000) IT'S VALUE = 5.400000 !!!
           Full derivation:
                                                                                                                                                                                                                                                                                                                       \sqrt{\left(3.000 \cdot x^{2.000} \cdot \ln\left(x + 2.000\right) + \frac{1.000}{x + 2.000} \cdot x^{3.000}\right)^{2.000} + \left(27.000 \cdot \frac{1.000}{3.000 + y}\right)^{2.000}}
 IN THE POINT (x = 3.000, y = 2.000)IT'S VALUE = 49.152!!!
           Let's consider the expression as a function of x variable: f(x) =
                                                                                                                                                                                                                                                                                                                                                                                                           x^{3.000} \cdot \ln{(x+2.000)}
 Maklorens formula for x near to 3.000000:
                                                                                                                                                                                                                                                                                       43.455 + 48.855 \cdot (x - 3.000) + 19.345 \cdot (x - 3.000)^{2.000} + 2.941 \cdot (x - 3.000)^{3.000} + 0.081 \cdot (x - 3.000)^{4.000}
 And remaining member is o maloe from:
                                                                                                                                                                                                                                                                                                                                                                                                                 (x - 3.000)^{4.000}
  Graph f(x):
           Tangent equation in point -2.000: f(x) =
                                                                                                                                                                                                                                                                                                                                                                                               (-inf) \cdot (x - (-2.000)) + inf
  Normal equation in point -2.000: f(x) =
```

3

 $0.000 \cdot (x - (-2.000)) + inf$
