CrInGeCrInGe Production. Super cringe introduction here: Let's calculate smth with expression given:

 $\tan x + \sin x$

Firstly, let's insert all constants and simplify it:

 $\tan x + \sin x$

BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT THIS EXPRESSION IN THE POINT ($\mathbf{x}=0.000000$)...

IT'S VALUE = 0.0000000 !!!

Calculating the 1 derivation of the expression:

1 step: finding a derivation of function:

 \boldsymbol{x}

here it is:

1.000

2 step: finding a derivation of function:

 $\sin x$

here it is:

 $\cos x$

3 step: finding a derivation of function:

 \boldsymbol{x}

here it is:

1.000

4 step: finding a derivation of function:

 $\tan x$

here it is:

$$\frac{1.000}{\cos x^{2.000}}$$

5 step: finding a derivation of function:

 $\tan x + \sin x$

here it is:

$$\frac{1.000}{\cos x^{2.000}} + \cos x$$

Calculating the 2 derivation of the expression: 1 step: finding a derivation of function:

x

here it is:

1.000

2 step: finding a derivation of function:

 $\cos x$

here it is:

$$(-1.000) \cdot \sin x$$

3 step: finding a derivation of function:

 \boldsymbol{x}

here it is:

1.000

4 step: finding a derivation of function:

 $\cos x$

here it is:

$$(-1.000) \cdot \sin x$$

 $5~\mathrm{step} \colon$ finding a derivation of function:

 $\cos x^{2.000}$

here it is:

$$2.000 \cdot \cos x \cdot (-1.000) \cdot \sin x$$

6 step: finding a derivation of function:

1.000

here it is:

0.000

7 step: finding a derivation of function:

 $\frac{1.000}{\cos x^{2.000}}$

here it is:

$$\frac{(-1.000) \cdot 2.000 \cdot \cos x \cdot (-1.000) \cdot \sin x}{(\cos x^{2.000})^{2.000}}$$

8 step: finding a derivation of function:

$$\frac{1.000}{\cos x^{2.000}} + \cos x$$

here it is:

$$\frac{(-1.000) \cdot 2.000 \cdot \cos x \cdot (-1.000) \cdot \sin x}{\left(\cos x^{2.000}\right)^{2.000}} + (-1.000) \cdot \sin x$$

Finally... The 2 derivation of the expression:

$$\frac{(-1.000) \cdot 2.000 \cdot \cos x \cdot (-1.000) \cdot \sin x}{\left(\cos x^{2.000}\right)^{2.000}} + (-1.000) \cdot \sin x$$

BRITISH SCIENTISTS WERE SHOCKED, WHEN THEY COUNT THE 2 DERIVATION OF THIS EXPRESSION IN THE POINT (x = 0.000000)...

IT'S VALUE = 0.0000000 !!!

Partial derivation of the expression on the variable 'x':

$$\frac{1.000}{\cos x^{2.000}} + \cos x$$

IN THE POINT (x = 0.000000) IT'S VALUE = 2.000000 !!!

Maklorens formula:

$$2.000 \cdot x + 0.167 \cdot x^{3.000}$$

And remainig member is o maloe from:

 $x^{3.000}$
